| Others: | OOP, ReactiveX, Lambda Expression, Sketch, Material design, Agile/Scrum … |

## Detailed Skills          *Referenced documents of my skills can be reached at www.box.com/minhbinh*

### Android - about 5 years.

Android is the most familiar platform of mine. I did implement many Android applications, such as: Loco Deals, HonestBee, GoodJob, CYC-Mover, Upward Mobility, etc.

- **Loco Deals** is the application helps users find the best deals wherever they go - Food & Drinks, Beauty, Shopping, Lifestyle, Entertainment and more. Use LOCO's location-based technology to zone in on discounts around you and redeem a deal within seconds.
    - o Tools: Android studio, Git, Sketch, Redmine
    - o Technologies: Java, Android SDK, Realm, Lambda Expression, Reactive programming, Location and Map, Firebase, RESTful, JSON, …
- **HonestBee** is one of the most successful outsourcing projects of Apps-Cyclone. It's also a very successful start-up until now. It provides online grocery concierge service in Singapore, Hong Kong, Taiwan and will be present in other cities.
    - o Tools: Android studio, Git, Sketch, Redmine
    - o Technologies: Java, Android SDK, Realm, Lambda Expression, Reactive programming, Location and Map, RESTful, JSON, …

- **GoodJob** is a self-product of Apps-Cyclone. This is where you can find trusted helpers and services around you. You also can mark a service is trusted then share with your friends.
    - o Tools: Android studio, Git, Sketch, Redmine
    - o Technologies: Java, Android SDK, Realm, Lambda Expression, Reactive programming, Location and Map, RESTful, Json, …
- In additional, I built some my own Android applications, which are **WiFi Password Recovery, MC Learning, …**

## iOS - more than 2 years

iOS is the main platform which I am currently working on. I became iOS developer when I joined IMT Solutions. Here are some applications which I and my co-worker developed:

- **Noyo Tablet** is an application framework for iPad. It offers user a quick and easy way to learn foreign language's vocabularies. As Upward Mobility, this is also a framework that customer can use to build many applications with difference languages.
    - o Tools: XCode, Sketch, Git, Redmine
    - o Technologies: Objective-C, SQLite, Audio Player
- **Pet Widget** is a community of pet lovers. They can share, discuss about their pets, log allergies, vaccinations, growth, and even more.
    - o Tools: XCode, Sketch, Git, Redmine
    - o Objective-C, SQLite, RESTful, JSON, Facebook Graph API, Google Map API, Location,

## Database Management Systems

I have experience with Microsoft SQL Server, MySQL, and SQLite. My specialty is Information System. I feel very confident with Database designing and analyzing. I am comfortable with complicated SQL queries. Besides the basic manipulating with database management tools, I can write and maintain store procedures, triggers, and cursors.

## Language Skills

I have not ever joined to any English test so I have no certificate for my English skills. During the time I was a student as well as in my currently job, I have to read many English technical textbooks. In addition, I have to communicate through emails by English during working days. So that, I feel confident with reading and writing skill but not very much in speaking and listening since I have little chance to practice.

## Personal Qualities

I am confident, enthusiastic and active. I am willing to do whatever to finish my job even under presser and challenge. In addition, I am adaptable and progressive. I always improve myself to reach my further objectives wherever I work.

## Interests

Whenever I have free time, I usually read newspapers and listen to music. Sometimes I watch some short films, which talk about some heroes or underworld groups. I didn't like long films as well as online games. They waste time and money.

--The End--
