Sumary

I have 2 years of experience in web development, both backend and frontend. I have experience in development of application website, education online system, micro service, asynchronous service. I really have the love of researching new technologies, it is proven through many projects that i have worked.

Education

2008 - 2013	Software Engineering	University of Information Technology, Viet Nam

Technical Proficiencies

Javascript	**ReactJS, NodeJS, AngularJS.**
Scala	**Play framework**
PHP	**Codeigniter Framework**
HTML/CSS	**HTML5, CSS3**
OS	**Linux**
VCS	**Git**
Database	**Mysql, Postgres, MongoDB, Redis, Neo4j, OrientDB**
Deployment	**Docker (beginner level)**

Soft Skills

- Pro-active, self initiative and the ability to work/study independently and in a team.
- Fast learning.

Experience

2/2016 - now **Moc Nhien Farm's website**   Freelancer

I have working on this project as a freelance deveoper in team of two developers. It's a flower farm website. This website introduces a flower farm. My responsibility is to build server with nodejs(express framework).
My role and responsibilities:
- Build rest API with nodejs, admin-side with ReactJS.
Technologies Utilized:
- Nodejs (express), ReactJS.

2/16 - now **Qanvast website**   Epsilon mobile - Freelancer

I have been working on this project as a freelance developer. It's a architectural website. I work with RectJS. My responsibility solves backlog tasks.

03/15 - 2/16 **GiftHunt App**   Mylady Bug, Viet Nam

I worked on this project about 1 year in a team of 4 developers. GiftHunt is a application system which recommend gift for user. My responsibility was both backend (rest api) and application web (mobile app was built by outsourcing team). At GiftHunt, you need to give a gift to friend, but you don't know what should you give, GiftHunt will help you. GiftHunt depends on target's public infomations to analyze and recommend for you a gift list. Then, you choose gift and send, system will send notification (anonymous gift) to him/her (if he/she installed app) and you will got response(like/dislike) from him/her.
GiftHunt server is built with Scala, a strong language in asyncronous handling. GiftHunt application Web is developed with ReactJS.
My role and responsibilities:
- Build rest API with scala. - Build application web with ReactJS.
Technologies Utilized:
- Scala (Play framework). - ReactJS, NodeJS, Webpack. - Postgres, Neo4j, OrientDB, Mongodb. - Docker, Jenskin. - Elastic Search.

1/15 - 3/15 **Livemix - DeeJay Online**   Pure Solutions, Viet Nam

I took part in this project to support realtime server. Livemix is a web application, it live streaming music which is played by Deejay. My primary responsibility is support to finish nodejs service for chat, send gift, and something in live room.
My role and responsibilities:
- Support to finsh nodejs service.
Technologies Utilized:
- Nodejs, SocketIO, Redis, Ruby On Rails, Postgres.

Experience

06/14 - 01/15 **Pureed - elearning system** Pure Solutions, Viet Nam

I worked on this project for 6 months with a team of 5 members. My primary responsibility was to build client side - a web application with AngularJS and chat/draw service with nodejs, Pureed is a online chool, where you can learn anything you need. Beside you can register to teach if you're good something. At pureed, each student/instructor has a timeline - as a social network, a library - include your courses and reference ebooks, a examination room, and the main room - live room, where you have living-learning with instructor. Live room have live-stream video, chat-box, realtime multiple-choice, white board.

My role and responsibilities:
- Build front-end app
- Build chat/draw service

Technologies Utilized:
- AngularJS, NodeJS, SocketIO.
- Ruby on Rails.
- Postgres, Redis,
- Grunt, Phusion Passenger.
- Cloudinary.
- Flash media server.

3/14 - 6/14 **Food center - personal project**

I continued to develop this project from a my course project. I called it Food center. Food center is a social network, where everyone can share their food porn and favourite place. It help you look at or recommend a restaurant, a street food location.

Technologies Utilized:
- PHP codeigniter framework, google map API, mysql

01/14 - 02/14 **Unifarm - website introduce company** Freelancer

I worked alone about 1 month for this project. I developed it with PHP (codeigniter framework). This website introduce Unifarm - a farm company.

08/12 - 02/13 **Internship** Cenvisco, Viet Nam

I worked with asp.net and front-end. My primary responsibility was convert from psd file to html/css page.
